DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's prior art figure 2 in combination with Cheng et al. (U.S. patent # 5,757,099). Applicant's prior art discloses claimed subject matters a 12th active filter (figure 2), Including a passive filter with a condenser, an inductor and a resistor (figure 2, item 7-1), a three phase structure (figure 2, item Phase A, B and C), a switch (figure 2, item 2-3), a voltage source converter (figure 2, item 2-4), a transformer (figure 2, item 2-2), a firing unit (figure 2, item 2-7), a control unit (figure 2, item 2-6) and a signal detection unit (figure 2, item 2-5). However applicant's prior art does not disclose the utilization of the technique for one passive filter per phase. Cheng et al. teaches the utilization of the

similar technique for one passive filter per phase (figure 4, item 34). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify applicant prior art's invention by utilizing the technique taught by Cheng et al. for the purpose of improve the efficiency of the active filter. In regards to claims 2-6, Applicant's prior art discloses claimed subject matters. Further Applicant's prior art in combination with Cheng et al.'s filter circuit meets the structure limitation.
